Do you want to apply your Big Data skills to help personalize the bol.com experience?

One of our 55+ autonomous Scrum teams is looking for a Software Engineer Big Data!

Do you want to apply your Big Data skills to help personalize the bol.com experience?

One of our 55+ autonomous Scrum teams is looking for a Software Engineer Big Data!

Over bol.com

Everybody in The Netherlands and Belgium knows bol.com. With over 6 million customers, 30 million monthly visits and 15 million products, bol.com is the most successful online retailer in the Dutch language region. As these numbers imply, bol.com is also a big data driven organization that 'breathes' IT. We currently employ over 1.200 people, 300 of which are IT-professionals, divided into 55+ Scrum teams. Together, we strive to make bol.com into the best, most customer-centric shop possible.

Your role

- Develop, test and implement big data / Java solutions, especially for (but not limited to) our personalization platform
- You work in an autonomous team; together you oversee software from development to production.
- You are and feel responsible for your software; You Build IT, You Run IT, You Love IT!

Who you are

A Software Engineer who is passionate about modern (open source) solutions. You have a proven ability to comprehend functional requirements, and you can translate insights into scalable solutions. You cherish performance, security and craftsmanship. You keep close tabs on IT-developments and love to be an inspirational big data front-runner.

Must haves

- Experience with Java and big data solutions, such as Hadoop and Cassandra
- Hands-on development experience, preferably in a Scrum/Agile setting
- Familiar with continuous integration & delivery
- Able to help with test strategies and familiar with performance testing and automated testing tools

As Software Engineer Big Data you'll join a Scrum team in the Shopping Experience Space, one of three feature spaces where agile en continuous delivery are the norm. In this space, everything revolves around the customer experience. Focus areas range from responsive websites, so the customer journey is optimized on all devices, to personalization on the bol.com platform. That platform will become your home away from home. Together with your Scrum team members – Software Engineers with bits and bytes for blood cells – you develop, test and

deploy big data / Java solutions that facilitate personalization. Innovation, both from a functional and a technical standpoint, is a daily reality, because there is still a world to be gained. You also analyze and solve performance issues, e.g. by utilizing Hazelcast. We focus on resiliency, e.g. with Hystrix, and on creating transparency in our application portfolio by devising indicators and using dashboard visualization.

Why work at bol.com?

Bol.com has one of the best work environments you'll ever encounter. From the casual atmosphere, to the invigorating energy of the building with its open spaces, to the overall high standard of professionalism. Our Scrum teams are autonomous and fully in charge of everything they deliver. We embrace innovation and new technologies. If you want to investigate and implement new techniques, go for it. And of course we have a Choose Your Own Device program for software engineers. We're also interested in what makes you tick as a person, in your desires and ambitions, and what projects suit you best. And then there's all of the other reasons, including our on campus soccer field, hackathons, fitness facilities, games-room, and our Friday afternoon get-together with drinks at our own bar.
